Abstract:

1980's, the industrialization of Eastern Taiwan began. Hualien accepted the industrial development projects while Ilan, located beside Hualien, restricted the industrial development and implemented administration. In this study, we compared the environmental consciousness of habitants of Hualien and Ilan, that age structures are the same. By analyzing the result of questionnaire survey, it was found that the habitants of Ilan and Hualien have similar environmental consciousness, and educational background, income, are factors of environmental consciousness.
